Item number	UD_10814
Weight	350kg
Length	1036mm
Width	790mm
Height	1940mm

Product description

TCN-D900-9G (H5) – Honey Configuration

Honey vending machine for indoor and outdoor use

The compact all-rounder for your farm gate, canopy and farm shop: the lift gently carries each jar up to the dispensing tray instead of letting it drop. For outdoor use, it is available with a roof and heating unit.

Lift system for jars **Indoor and outdoor** **6 tiers** **Break-in-resistant glass**

Why this machine suits your beekeeping business

Jars arrive intact

The lift collects the product at the height of its tier and brings it to the dispensing tray. No drop, no breakage.

Round-the-clock sales

Sell your honey directly at the farm or roadside, including at night and at weekends.

Built for outdoor use

With a roof and heating unit, the machine stays protected outdoors, in summer and winter alike.

Cashless payment

With a card terminal, your customers can pay by card, phone or watch. Cash is optional.

Honey configuration

For honey, we build the machine with two spiral tiers for small items and four conveyor belt tiers for jars.

Tier 1 Single spiral 28 mm
Honey sticks, lip balm, propolis drops **up to 9 products**

Tier 2 Single spiral 38 mm
Beeswax candles, small oil vials **up to 9 products**

Levels 3–6 Conveyor belt
Honey jars, e.g. 125 g or 250 g **up to 7 jars side by side**

Other jar sizes or products? With the ‘Individual’ option, we’ll set up the levels to match your range.

In Austria: up to 55% subsidy

Vending machines are eligible under the beekeeping subsidy ‘Investments in the beekeeping sector’ (measure 55-04). The amount depends on your evidence:

35 % Honey Quality Programme or Bee Health Programme

45 % both programmes

55 % both programmes and organic certificate

For beekeeping businesses based in Austria with at least 50 productive colonies

Application via the AMA Digital Funding Platform, **before purchase** – we’ll send you a quote as a PDF for this

Applications for the current beekeeping year until 15 June 2027; allocated in order of receipt

Read all requirements in the guide

Non-binding information, no funding guarantee. The Special Guideline on Beekeeping Subsidy 2023–2027 and the AMA’s decision are authoritative.

Cashless (optional)	**Nayax Onyx, Nayax Media 4, SenVend UX700**
Cash (optional)	**Coin changer and banknote reader**
Platform	**SaaS cloud management**
Languages	**DE / EN / CN**

For indoor and outdoor use. The machine is delivered as an indoor unit. For outdoor use, choose the version with a roof or with a roof and heating unit. You fit the roof yourself. The machine works best under a canopy as well, which keeps the glass front and control panel dry.

FAQ

Do honey jars break in the machine?

No, the lift system takes care of that. It picks up the jar at the level of the tier and sets it down in the dispensing tray, rather than letting it drop.

Which jar sizes fit?

In the honey configuration, the four conveyor tiers are designed for common jars such as 125 g and 250 g. For other sizes, choose the 'Individual' option and we'll agree the tiers with you.

Can the machine stand outdoors?

Yes. For this, choose the version with a roof or with a roof and heating unit. We recommend the heating unit for any location with frost.

Is the honey vending machine also available with a large touchscreen?

Yes, for indoor use we offer our **honey vending machine with lift and 22-inch touchscreen**. It is wider and shows your varieties with picture, origin and price.

Does honey need to be refrigerated?

No. You set the temperature on the machine to suit your range. You only need cooling if you also sell chilled products.

Can I get the machine subsidised in Austria?

Yes, vending machines are eligible for up to 55% funding under the beekeeping subsidy 55-04. Important: the application must be submitted before purchase. We'll send you a quote as a PDF for this.

How long does delivery take?

Around 14 weeks from order. Plan this together with your subsidy application: for the current beekeeping year, the machine must be delivered by 31 July 2027. It's best to submit the application early; we can provide the quote straight away.

Can I finance it?

Yes, through our partners we offer leasing and hire purchase with terms of 24 to 54 months. You'll receive a non-binding quote within 1–2 working days.

Let's plan your honey vending machine

We'll go through location, jars, payment system and funding application with you. Free and non-binding, by phone, by video or at our showroom in Nabburg.
