

Coupling for conveyor belt

Coupling for conveyor belt/sidepush in vending machines. Provides optimal power transmission between engine and transport system. Flexible, efficient and durable!

Item number UD10480

Weight 0.01kg

Product description

COUPLING FOR CONVEYOR BELT OF VENDING MACHINES

The **Coupling** is an essential connecting element for transport systems in vending machines. It ensures reliable transmission of the drive force between the motor and the conveyor belt and allows for **smooth operation**.

This coupling is the ideal solution for **reliable transport systems** in vending machines and ensures **durable and efficient performance**.

Advantages:

- ? Flexible:** Compatible with various transport systems.
- ? Efficient:** Provides reliable connection and optimal power transmission.
- ? Handling:** Fast installation and easy replacement.
