

Micro switch / position switch

Microswitches and position switches for vending machines. Reliable COM/NO/NC contacts to detect doors, flaps and end positions

Item number UD10640

Weight 0.05kg

Product description

Microswitches (3-pin) for vending machines

Small component, crucial function. This switch is the nervous system of your machine. It detects mechanical states and reports them to the control – whether the door is closed, the output flap is open or the transport lift has reached its end position.

CONTROL: A defective switch can cause the machine "thinks", the door is open, and the service is denied. A quick exchange immediately ensures operational readiness.

Technical details & Connections

COM (Common) Joint connection

NO (Normally Open) Locker (contact closes at pressure)

NC (Normally Closed) Opener (contact opens at pressure)

Application Door sensor, lift end stop, flap sensor

Benefits

Universal: Useable by NO/NC occupancy for various functions.

Reliable: Clear haptic click for secure signaling.

Security: Prevents malfunctions of mechanical components.

troubleshooting

Often it is just a small switch that shuts down the big machine. Exchange wear parts in time.
