

Temperature sensor for vending machines cooling

Replacement temperature sensor (NTC) for TCN machines. Precisely controls cooling, prevents ironing and ensures product quality. Simple exchange.

Item number UD10646

Product description

Temperature sensor for cooling system

Precise control for optimal freshness. This sensor continuously monitors the internal temperature of your machine and controls the cooling unit. It is indispensable to maintain the cooling chain and prevent the system from being ironed.

QUALITY ASSESSMENT: A defective sensor often leads to fluctuating temperatures or permanent running of the compressor. Exchange it to save energy and protect goods.

Product details

Component Temperature sensor (NTC)

Connection Plug connection (2-pin)

Function Measurement & Regulation

Compatibility TCN cooling systems

Benefits

Efficiency: Make sure the compressor only runs if necessary.

Protection: Prevents the freezing of drinks and keeps food fresh.

Installation: Easy replacement thanks to standardized plug.

Constant cooling guarantees

Ensure the quality of your products by reliable temperature monitoring.
