

Gear for TCN Lift Motor

Original replacement gear for the lift motor of TCN machines. Secures the drive of the elevator car and fixes slides or blockages on the elevator system.

Item number UD10700

Product description

Gear for TCN lift motor

The drive for your elevator. This special gear transmits the force of the lift motor to the belt mechanism. It is crucial for the gentle and precise movement of the elevator car in automatic machines with lift system.

FUNCTIONS:When the lift slides, cracks or no longer moves, worn teeth are often the cause of this component. An exchange restores full mobility.
