

VR Motorcycle Simulator – Arcade-Racing

The VR Motorcycle Simulator brings an intense racing experience directly into your arcade area, gaming hall, event location or your 24/7 entertainment area.

Item number UD10738

Product description

VR ARCADE SIMULATOR

VR Motorcycle Simulator – Arcade Racing with Real Movement

The **VR Motorcycle Simulator** brings an intense racing experience directly into your arcade area, gaming hall, event location or your 24/7 entertainment area. The combination of VR glasses, mobile platform, large touchscreen and powerful movement system creates an immersive driving experience that attracts visitors immediately.

The included **VR glasses E3-C** ensures direct immersion in the virtual racing world. At the same time, the simulator reacts with movements, inclination and dynamic feedback to the game. This creates a realistic driving feeling with a high fun factor and a strong visual effect at the location.

?

VR glasses included

E3-C Helmet is already included.

??

Movement system

3 motors and electric cylinders for dynamic driving.

??

22-inch touchscreen

For modern operation, game selection and presentation.

?

Arcade-Blickfang

Ideal for entertainment areas with high visitor frequency.

Immersive Racing Experience with VR

The simulator was developed for action-rich VR racing games. The player sets up the VR glasses, takes place on the motorcycle seat and controls the game via the integrated handles. During the game, the platform moves to match the virtual track and increases acceleration, curve feeling and driving dynamics.

Thanks to the LED lighting, the modern housing design and the large front screen, the simulator also acts visually as a real eye-catcher. Especially at heavily frequented locations, the device provides attention and invites you directly to try out.

Technology & Equipment
