Membership system for arcade halls, gaming halls and entertainment centers. With RFID cards, card readers, desktop POS as server unit, credit management and optional self-service kiosk.

Item number UD10745

Product description

ARCADE MEMBERSHIP SYSTEM

Membership System for Arcade Halls

With **Membership System for Arcade Halls** run your arcade devices, play hall or family entertainment center modern, cashless and efficient. Your customers use RFID membership cards, upload credits and play directly on the connected devices.

Central solution for credits, cards and arcade devices

The system allows you to centrally manage membership cards, customer data, credits, card charges, transactions and ticket cancellation. Each customer receives its own RFID card. This can be charged with credit and then used directly to the connected arcade devices.

The connected devices are equipped with Card Readers. As soon as the customer holds his card to the reader, the corresponding credit is debited and the device is unlocked.

Desktop POS as a server and administration unit

In this variant, **Desktop PC / Touchscreen Desktop POS** included. It serves as a local server and administration unit for your membership system at the same time.

A separate server PC is not required. You can output cards, upload credits, collect payments, manage customers and control transactions directly via the desktop POS.

Optional with self-service kiosk

The **Self-service kiosk** is optionally available. It makes sense if your customers are to buy, charge or manage cards independently.

If you have staff on site, the self-service kiosk is usually not necessary. In this case, your staff will take the card and credit management directly over the desktop POS.

Touchscreen Desktop POS with Dual Screen Display

The Desktop POS has a modern touchscreen display and a dual screen system. The second screen supports picture carousels and video playback and can display important information during customer payment.

- Display of payment amount and card credit
- Displaying Ticket Redemption Information
- Secondary screen for advertising, videos and customer information
- Includes cash drawer, mouse and keyboard
- Ideal for supervised arcade sites with staff

Your benefits

Cashless arcade system Your customers play comfortably with RFID membership cards.

Desktop POS instead of separate server The desktop POS takes over the local server and administration function.

Central credit management Manage maps, charges, customers and transactions centrally.

Optional self-service Expand your system with a self-service kiosk as needed.
