Weight	460kg
Length	1460mm
Width	850mm
Height	1940mm

Product description

TCN-D900-11G (22SP) – Honey configuration

Honey vending machine with lift and 22-inch touchscreen

The wide indoor machine for farm shops, apiaries and retail spaces: the lift gently moves each jar into the dispensing tray instead of dropping it. On the large touchscreen you show your varieties, origin and prices.

Lift system for jars **22-inch touchscreen** **6 levels** **4G and Wi-Fi**

Why the machine suits your apiary

Jars arrive intact

The lift picks up the product at the level of its shelf and brings it to the dispensing tray. No drop, no breakage.

Sales around the clock

Your customers can buy even when you're at the hives or the farm shop is closed.

Showing your varieties properly

On 22 inches you present blossom, forest or cream honey with image, origin and price.

Cashless payment

With a card terminal your customers can pay by card, phone or watch. Cash is optional.

Honey configuration

For honey we build the machine with two spiral levels for small items and four conveyor belt levels for jars.

Level 1 Single spiral 28 mm
Honey sticks, lip balm, propolis drops **up to 10 products**

Level 2 Single spiral 38 mm
Beeswax candles, small oil bottles **up to 10 products**

Level 3–6 Conveyor belt
Honey jars, e.g. 125 g or 250 g **up to 9 jars side by side**

Other jar sizes or products? With the “Individual” option, we'll set up the levels to match your range.

In Austria: up to 55% subsidy

Vending machines are eligible for the beekeeping subsidy “Investments in the Beekeeping Sector” (measure 55-04). The amount depends on your documentation:

35 % Honey Quality Programme or Bee Health Programme

45 % both programmes

55 % both programmes and organic certificate

For beekeeping businesses based in Austria with at least 50 production colonies

Application via the AMA's Digital Funding Platform, **before purchase** – we'll send you a quote as a PDF for this

Applications for the current beekeeping year until 15 June 2027, awarded in order of receipt

Read all the requirements in the guide

Non-binding information, no funding guarantee. The Special Guideline on Beekeeping Subsidies 2023–2027 and the AMA's decision are decisive.

For indoor use. Machines with a 22-inch display are designed for indoor spaces, such as a farm shop, sales room or lobby. If installed outdoors, use is at your own risk; we accept no liability for this.

FAQ

Do honey jars break inside the machine?

No, the lift system takes care of that: it picks up the jar at the level of the tier and sets it down in the dispensing tray, instead of dropping it.

Which jar sizes fit?

In the honey configuration, the four conveyor belt tiers are designed for common jars such as 125 g and 250 g. For other sizes, choose the "Custom" option and we will agree the tiers with you.

Does honey need to be refrigerated?

No. You set the temperature on the machine to suit your range. You only need refrigeration if you also sell chilled products.

Can I get the machine subsidised in Austria?

Yes, vending machines are eligible for up to 55% funding under the beekeeping grant 55-04. Important: the application must be submitted before purchase. We will send you a quote as a PDF for this.

Can I place the machine outdoors?

This model is intended for indoor use. For outdoor use, we recommend our **Honey vending machine Indoor & Outdoor**.

How long does delivery take?

Around 14 weeks from order. Plan this with your grant application: for the current beekeeping year, the machine must be delivered by 31 July 2027. It is best to submit the application early; you can get the quote for it from us straight away.

Can I finance it?

Yes, through our partners we offer leasing and hire purchase with terms of 24 to 54 months. You will receive a non-binding quote within 1–2 working days.

Let's plan your honey vending machine

We will go through jars, tiers, payment system and grant application with you. Free and non-binding, by phone, by video or in our showroom in Nabburg.
